

Dear Hiring Manager, University Recruiter, Oracle,

I am writing to express my interest in Oracle's Data Scientist Intern position. As a student pursuing a Master's degree in Computer Science at the University of California - San Diego, focusing on Machine Learning and Data Systems, I am excited for the opportunity to gain invaluable experience and contribute to real Oracle products and services.

My previous Internship experience working as a Full Stack Developer at Makos Infotech, where I was responsible for developing the server-side rendering of their main website by integrating existing and new relational databases utilizing JQuery, PHP, and MySQL Workbench. Additionally, I have interned as a Data Analyst at LeadingIndia.ai, where my team and I built a Vaccine Prediction model for the H1N1 and seasonal flu vaccines to estimate the public acceptance rate of the Covid-19 vaccine accurately. I wrote a Blog showcasing the correlation between the two pandemics and secured the first position amongst my peers.

Further, my course Thesis on Recommender systems using collaborative filtering and latent factor models has helped me to gain hands-on experience in predictive modeling, data pipeline, aggregation, feature engineering, and visualization. I am excited to bring my skills and expertise to Oracle to build solutions to tackle real-world business problems. I am confident that my technical abilities, innate curiosity, and ability to learn quickly will enable me to make valuable contributions to your team. I am excited to have the opportunity to be part of a powerful network of professionals, managers, and executives at Oracle.

Thank you for considering my application. I look forward to hearing from you and discussing how I can contribute to your team's success.

Sincerely,

Jay Jhaveri
