

Dear Hiring Manager, University Recruiter, Oracle,

I am excited to apply for the Software Engineer Intern position at Oracle. As a computer science student at the University of California – San Diego, I have completed coursework in various relevant areas, including artificial intelligence, algorithms, big data, data structures, database management systems, machine learning, object-oriented programming, and software programming. I am proficient in Python, Java, SQL, and have experience with web and mobile application development.

In my previous internship as a Full Stack Development Intern at Makos Infotech, I developed the server-side rendering for their central website using JQuery, PHP, and MySQL. Along with this. I also created and managed the existing relational databases using MySQL Workbench. Further, I helped model the website's user interface using Figma and Bootstrap. I enjoyed the opportunity to work on a real-world project and make a tangible impact on the company's product.

I am confident that besides my academic background and practical experience, my passion for problem-solving makes me a strong fit as a Software Engineering intern at Oracle. I am eager to use my technical skills to help design and build innovative new systems from the ground up and contribute to developing cutting-edge technologies at Oracle. I am excited about the opportunity to work with industry-leading professionals and learn from their expertise.

Thank you for considering my application. I am excited about the opportunity to join the Oracle team and make a meaningful contribution to your company.

Sincerely,

Jay Jhaveri
